c

(CURRENTLY AMENDED) A computer annotator system for accessing Internet data addresses, the system comprising:

an electronic tablet having visible marking capability;

a marking stylus associated with the tablet;

a device for associating at least one temporarily marked location on said tablet with a preselected Internet data address wherein subsequently accessing said marked location with said stylus triggers a shift to said data address associated with said marked location.

2. (ORIGINAL) The system as set forth in claim 1 comprising:

said tablet having at least one predetermined first surface region accessible to said stylus wherein annotating function commands are implemented.

3. (CURRENTLY AMENDED) The system as set forth in claim 2 comprising:

said table having at least one predetermined second surface region accessible to said stylus wherein ~~free-form images~~ freehand symbols indicative of the preselected data address are entered.

4. (PREVIOUSLY CANCELLED)

5. (CURRENTLY AMENDED) A method for indexing computer-accessible Internet sites, the method comprising:

accessing a first ~~computer-accessible site~~ of said sites;

associating an address indicative of the first ~~computer-accessible site~~ of said sites with a first location coordinate address on a computer writing tablet via a first visible marking a first random location on said writing tablet during access of said first ~~computer-accessible site~~ of said sites;

accessing a second ~~computer-accessible site~~ of said sites; and

AFTER FINAL

1 associating an address indicative of the second ~~computer-accessible site~~ of said sites
2 with a second location coordinate address on a computer writing tablet via a second visible
3 marking on a second random location on said writing tablet during access of said second
4 ~~computer-accessible site~~ of said sites.

5
6 6. (CURRENTLY AMENDED) The method as set forth in claim 5 further comprising:
7 continuing said method for a plurality of computer-accessible internet sites other than
8 said first ~~computer-accessible site~~ and said second ~~computer-accessible site~~ as long as there is
9 available space for a further visible marking.

10
11 7. (CURRENTLY AMENDED) A method as set forth in claim 5 comprising:
12 erasing a said visible marking on said writing tablet after a last access to an associated
13 address indicative of a computer-accessible internet site.

14
15 8. (CURRENTLY AMENDED) A method for using a computer writing tablet, the method
16 comprising:

17 associating an input-output port of the tablet with signals indicative of Internet-
18 associated computer data addresses;

19 when each of a plurality of the Internet-associated computer data addresses is
20 accessed, writing a mnemonic object associated therewith respectively, wherein a location on
21 said tablet of the mnemonic object is coupled to a current one of said Internet-associated
22 computer data addresses; and

23 accessing any specific one of said plurality of the Internet-associated computer data
24 addresses by selecting the mnemonic object associated therewith.

25
26 9. (ORIGINAL) The method as set forth in claim 8 comprising:
27 predefining specific locations on said tablet with data indexing functions.

28
29 10. (ORIGINAL) The method as set forth in claim 9 comprising:

AFTER FINAL

1 erasing each said mnemonic object for disassociating a location from the current one of
2 said computer data addresses associated therewith.

3
4 11. (ORIGINAL) A computerized method comprising:
5 accessing an internet site; and
6 associating an address of the site with a writable-erasable mnemonic device in a
7 computer writing tablet.

8
9 12. (ORIGINAL) The method as set forth in claim 11 comprising:
10 providing writing table function keys associated with writing-erasing a mnemonic device
11 on said computer writing tablet.

12
13 13. (ORIGINAL) The method as set forth in claim 11 comprising:
14 providing predetermined coordinate regions of the writing tablet such that each said
15 mnemonic device is automatically associated with one of said predetermined coordinate regions
16 when entered therein.

17
18 14. (ORIGINAL) The method as set forth in claim 11 comprising:
19 automatically alternating access between a plurality of addresses accessed and
20 associated with mnemonic devices by alternating current selection between said mnemonic
21 devices with a writing tablet writing instrument.

Alternat-

22
23 15. (AMENDED CURRENTLY) A computer memory comprising:
24 computer code for recording temporary symbols associated with an Internet site
25 address; 28
26 computer code associating the Internet site address with a writable-erasable mnemonic
27 device in a computer writing tablet for receiving said temporary symbols; and
28 computer code for accessing said Internet site address via said temporary symbols.

29
30 16. (PREVIOUSLY CANCELLED)

AFTER FINAL

- 1 17. (ORIGINAL) An internet search tool comprising:
2 an internet access device;
3 in communication with the internet access device, a writing tablet and associated inking
4 stylus; and
5 associated with the combination of internet access device, writing tablet and stylus,
6 program code using said tablet for generating bookmarks related to respective search resultant
7 internet sites. (8)
- 8
9 18. (ORIGINAL) The tool as set forth in claim 17 wherein each of said bookmarks is a
10 handwritten mnemonics associated with a internet site address. (8)
- 11
12 19. (ORIGINAL) The tool as set forth in claim 17 wherein each of said bookmarks is a
13 temporary representation of coordinates on said writing tablet. (9)
- 14
15 20. (ORIGINAL) The tool as set forth in claim 19 wherein each of said bookmarks activates
16 a jump from a current internet site address to an internet site associated with another selected
17 one of said bookmarks.
